

Déjà-vu — design Naoto Fukasawa, 2005

Sometimes normality can be the fruit of a lengthy process of study and refining. This is what happened in the case of Déjà-Vu, a stool whose forms give a reassuring sense of familiarity, inspired as they are by the classic wooden stool, but actually produced using a D-shaped extruded aluminium profile. This solution was devised by designer Naoto Fukasawa together with Magis, to create a versatile, light and durable item of furniture. Available in polished or black

painting aluminium and in three different heights, ready to meet the endless different requirements of the living, office and contract worlds, Déjà-vu does not demand a constant place in the limelight, and yet its discreet presence is always appreciated, be it alone or together with the seat and table from the same family.

Production Process
