Electrical components supplied
(in the fuse box)

- 2 x Power Supply
- 1 x Control Unit
- 1 x VBUS Coupler
- 1 x VBUS IO Module

Additional components supplied but not shown:

- 1 x Control and distribution unit

It is obligatory for technical planning, installation and initial commissioning to be accompanied by a certified service partner and by booking a Dornbracht service package.

Detailed information on the service package can be found at www.dornbracht-professional.com.

Installation of the water pipes and electrical cables must be planned.

OPTIONAL ACCESSORIES

Concealed rough components

Optional accessories Embrace

The AQUAMOON^{ATT} miscellaneous package (12 330 970 90) is an optional accessory that is installed inside the ceiling module. The additional spray EMBRACE is made available with this package. It changes the weight, flow rate as well as requirements for drainage capacity and water supply (see technical data page 19).

Information

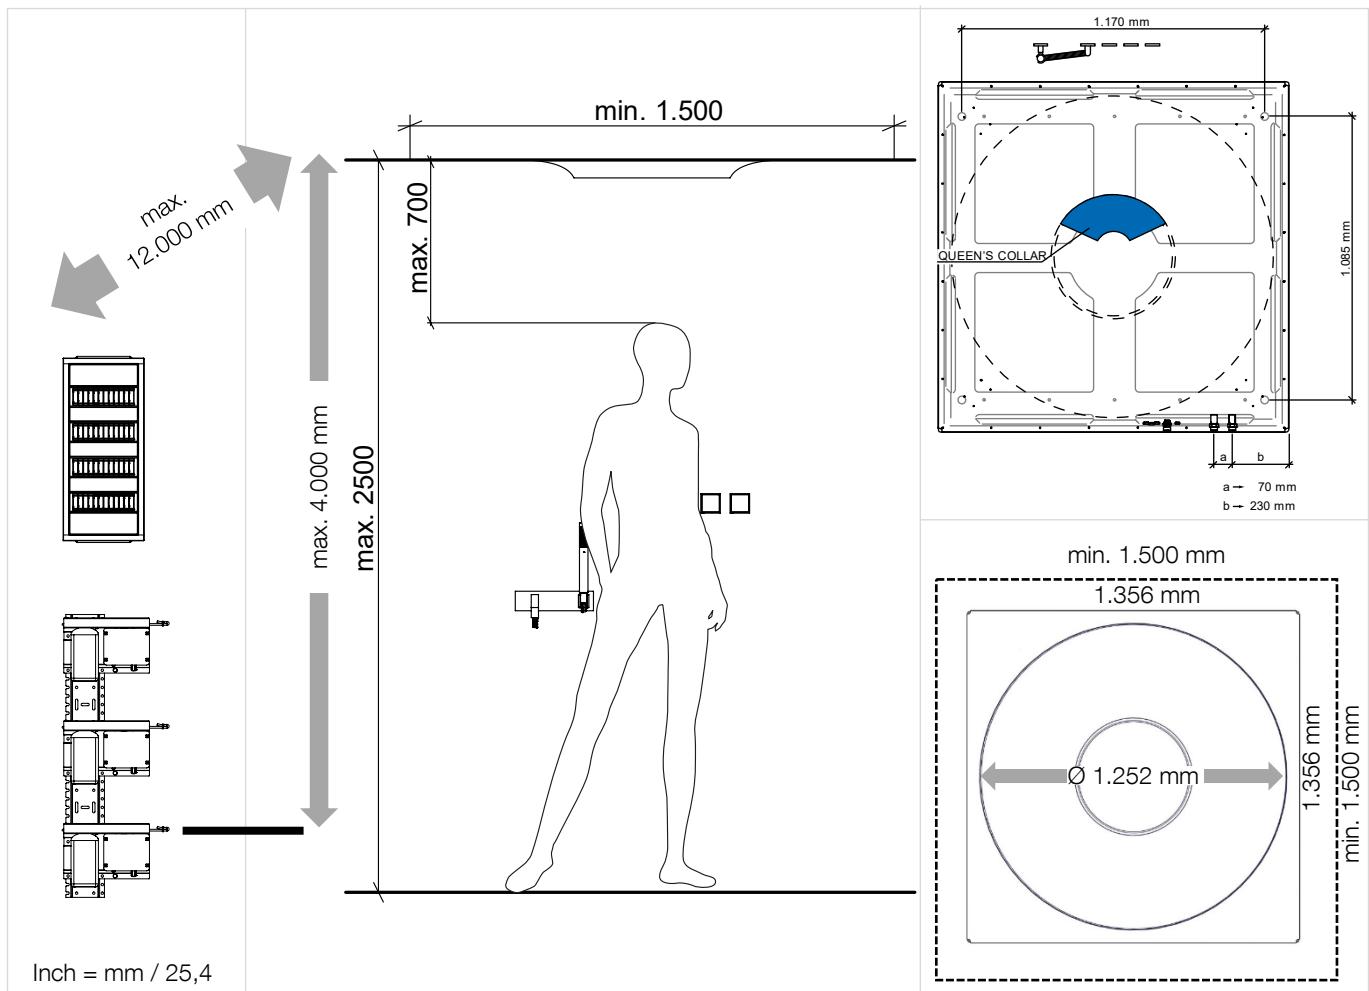

POSITIONING

Ceiling module

Pre-wall system

Operating conditions

Positioning

Observe the regulations for protection zones according to DIN VDE 0100, Part 701 (IEC 60364-7-701).

Electrical and fragrance components

- 12.000 mm / 39 ft 4-3/8" maximum distance to the AQUAMOON^{ATT}
- outside the wet zone
- accessible for inspection, in an easily accessible area
- 5 – 35 °C / 41 – 95 °F ambient temperature
- 1.500 x 1.500 mm / 4 ft 11" x 4 ft 11" minimum size of the shower room
- 2.500 mm / 8 ft 2-3/8" maximum room height
- 700 mm / 2 ft 3-1/2" recommended maximum distance between ceiling module and user

The fragrance modules and the power supply have to be installed separately from each other. The fragrance modules must not be installed above the power supply. It has to be ensured that the fragrances can never come in contact with live parts. Supply leads can be extended (by the customer) to a maximum 2,000 mm / 6 ft 6-3/4".

- 4.000 mm / 13 ft 1,48" maximum difference in height to the ceiling module

The fragrance modules have to be installed at least of 1,000 mm / 3 ft 3-3/8" away from the nearest heat source (e.g. Steam generator, heating).

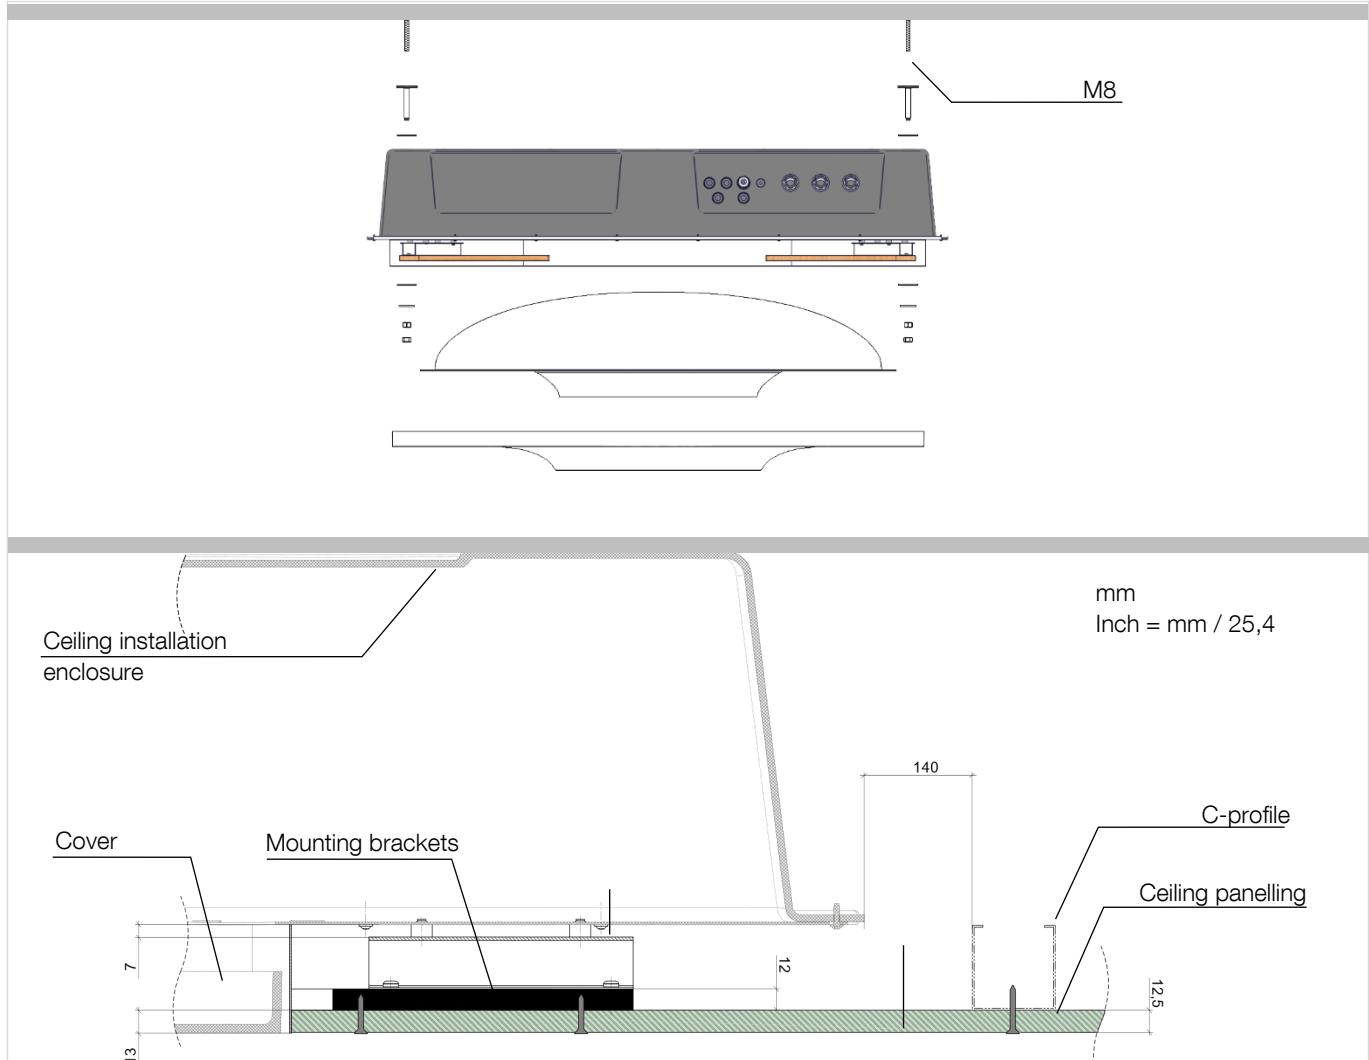

If this cannot be done, a radiant plate or heat shield must be fitted between the heat source and the fragrance modules and the room must have additional ventilation!

BASICS
Dimensions
Information

Positioning
CEILING MODULE
Pre-wall system
Operating conditions

Ceiling module

A ceiling construction with adequate structural strength for the permanent attachment of the ceiling module (weight: 78,5 kg / 173 lbs. (US)) is essential.

- ⚠ It takes 2 people to fit the ceiling module!
- ⚠ Only use suitable ladders / climbing aids.
- ⚠ Wear safety gloves.

A structural engineer should select suitable fixing materials for the particular ceiling.

M8 threaded bolts (minimum strength: 2,000 N) are required to secure the ceiling module.

- 140 mm / 5-1/2 " (Mitte / Mitte) maximum distance between the ceiling installation enclosure and the ceiling construction profiles.
- 12,5 mm / 1/2 " oder 20 mm / 3/4 " thick ceiling panelling is possible.

The ceiling panelling must be screwed to the ceiling installation mounting brackets with boring head screws.

Pre-wall system

The recess depths required for SMART TOOLS control elements, AQUAMOON^{ATT} and complete hand shower set make it essential to have a pre-wall system at the wall (and ceiling, if applicable).

The proper execution of the pre-wall installation, can ensure compliance with soundproofing, heat insulation and fire protection standards.

Pre-wall installation systems are available from various suppliers (e.g. Geberit, Tece, Viega, etc.).

Pre-wall installations can also be implemented with C-profiles (e.g. Knauf, Rigips Saint-Gobain, Sheetrock, Siniat, etc.).

Wood can also be used, unless this contravenes the regulations of the country concerned.

Note the recess depths of the components.

The SMART TOOLS control elements concealed rough parts are fitted in the pre-wall panelling.

- 30 mm / 1-1/8" possible maximum thickness of the panelling for the SMART TOOLS control elements.
- 7 – 25 mm / 1/4" – 1" construction (tiles, natural stone, etc.), possible in front of the (plasterboard, etc.), panelling for the SMART TOOLS control elements.
- 1,650 mm / 5 ft 5" maximum height of the closed pre-wall, to allow the concealed rough parts of SMART TOOLS control elements and the VBUS cable to be fitted.

The ceiling construction must not put any strain on the ceiling installation enclosure.

Profiles must be attached around the circumference of the ceiling installation enclosure. The ceiling profiles must align with the mounting brackets of the ceiling installation enclosure.

OPERATING CONDITIONS

Operating conditions

Area of application

The product is not designed for outdoor use.

Dornbracht must be consulted before operating the device in a steam, chlorine or salt-laden atmosphere.

Water quality must be ensured by installing a filter or a water conditioning system.

Large differences in pressure between cold and hot water supply must be balanced.

Maximum permissible relative humidity (without condensation) 95 %

Zulässige Umgebungstemperaturen

AQUAMOON ^{ATT}	5 – 40 °C /	41 – 104 °F
SMART TOOLS control elements	5 – 35 °C /	41 – 95 °F
Storage	5 – 35 °C /	41 – 95 °F
Fragrance modules	5 – 35 °C /	41 – 95 °F
Store somewhere dust-free and dry.		

Permissible operating temperatures

Measuring point: Concealed rough parts for eVALVE (affusion pipe)

Cold water temperature	5 – 20 °C /	41 – 68 °F
Recommended cold water temperature	15 °C /	59 °F
Hot water temperature	55 – 65 °C /	131 – 149 °F
Recommended hot water temperature	60 °C /	140 °F
Thermal disinfection (max. 10:00 mins.)	< 75 °C /	< 167 °F

Flow pressure

Measuring point: control and distribution unit AQUAMOON^{ATT} (distributionblock)

Permissible flow pressure	250 – 400 kPa /	36 – 58 psi /	2,5 – 4 bar
Recommended flow pressure	300 kPa /	44 psi /	3 bar
Maximum difference in flow pressure between HW + CW	100 kPa /	14,5 psi /	1 bar
Recommended difference in flow pressure between HW + CW	≤ 50 kPa /	≤ 7 psi /	≤ 0,5 bar

Fit a speed-controlled pressure booster in the main pipe, if necessary.

Water hardness

Recommended water hardness 6 – 7 °dH / 107 – 125 ppm CaCO₃ / 7,5 – 8,8 °e / 10,7 – 12,5 °fH

Fit a water softener into the main pipe, if necessary. The reduction in pressure caused by the water softener must be taken into account.

Basics

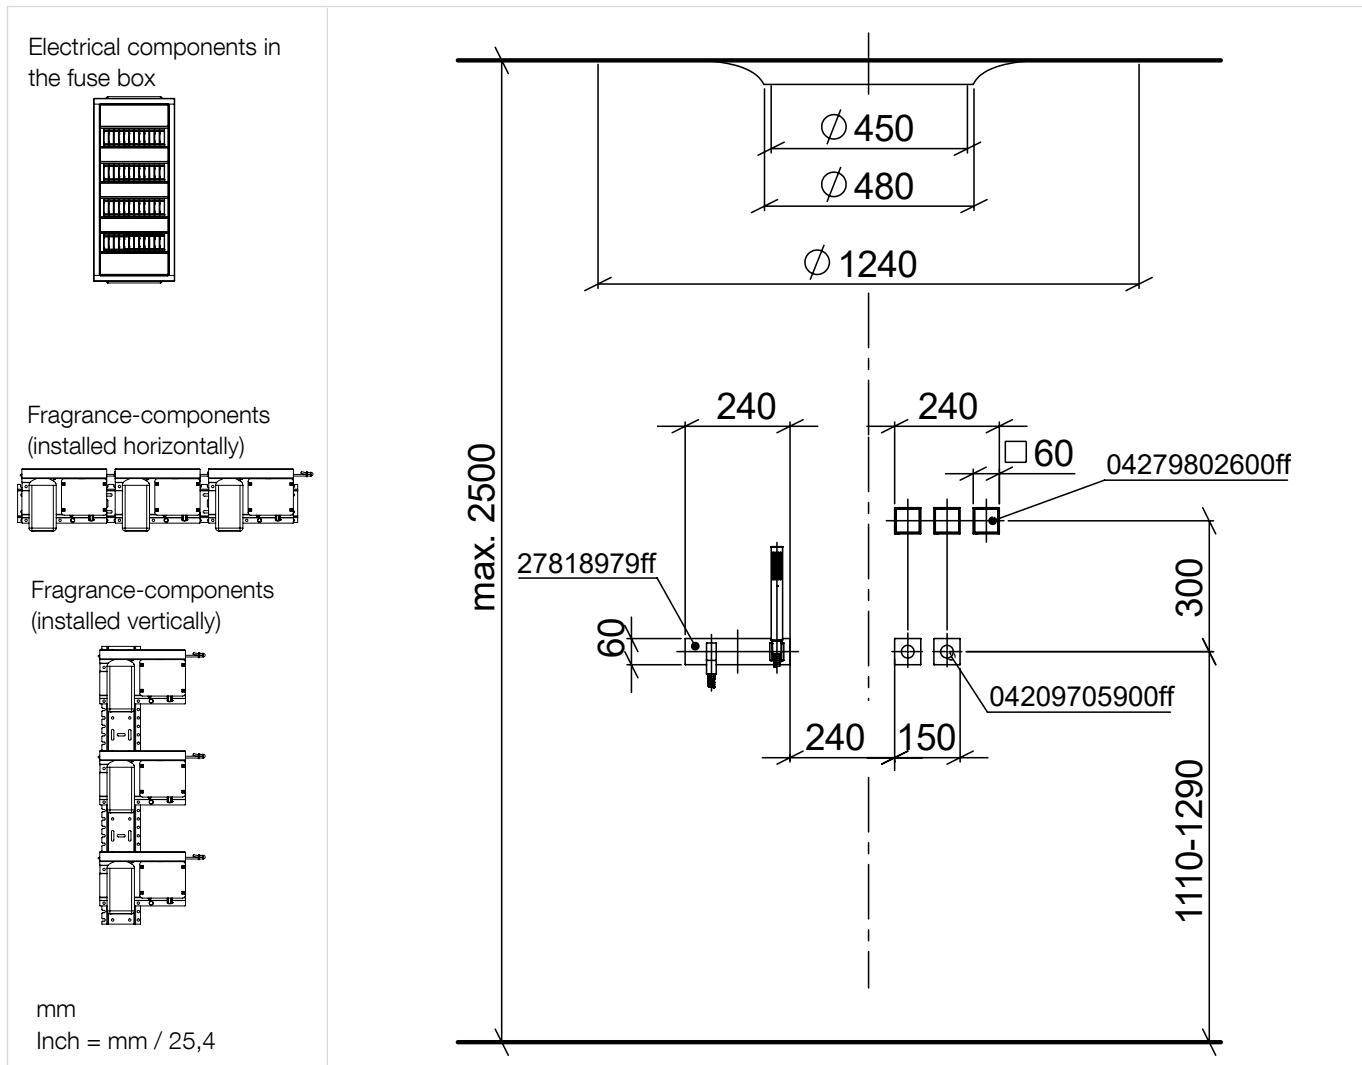

DIMENSIONS

Information

DIMENSIONS

Cutouts

Dimensions

- 90 mm / 3-1/2" minimum horizontal and/or vertical distance (centre / centre) for SMART TOOLS control elements
 - The distance must never be less than this!
- 1.200 mm / 4 ft 3-5/8" recommended height difference between the top edge of the finished floor (TEFF) and the complete hand shower set for a person who is 1,750 mm / 5 ft 9" tall

The positions and dimensions can be adapted to meet individual needs.

CUTOUTS

Cutouts

A – Hand shower set

B – SMART TOOLS control elements

C – AQUAMOON

! The concealed rough parts for AQUAMOON, eVALVE and SMART TOOLS, as well as the VBUS cable must be fitted and tested before the pre-wall is closed.

For the SMART TOOLS control elements:

- $\varnothing 56$ mm / $\varnothing 2-1/4$ " drilled hole in the panelling for the concealed rough parts
- $42 \pm 1 \times 42 \pm 1$ mm / $1-5/8$ " x $1-5/8$ " cutout in the wall construction (tiles, natural stone, etc.)

STANDARD INSTALLATION

Schematic diagram

Key

Plumbing information

Standard installation

DN 20 = NPS 3/4"

DN 15 = NPS 1/2"

Inch = mm / 25,4

Required nominal diameter (DN) for pipes and fittings:

- DN 20 – hot and cold water pipe (HW + CW)
- DN 15 – Hand shower (Loop)
- DN 15 – circulation line (C)

- 900 mm / 2 ft 11-3/8" minimum distance between the circulation pipe connection (C) and the first eVALVE of the AQUAMOON^{ATT}

The following components for the hot and cold water pipe (WW + KW) must be positioned so that access is possible at all times (accessible for inspection):

- 2 x stop valve (DN 20)
- 2 x dirt trap (DN 20)

WATER

Electricity

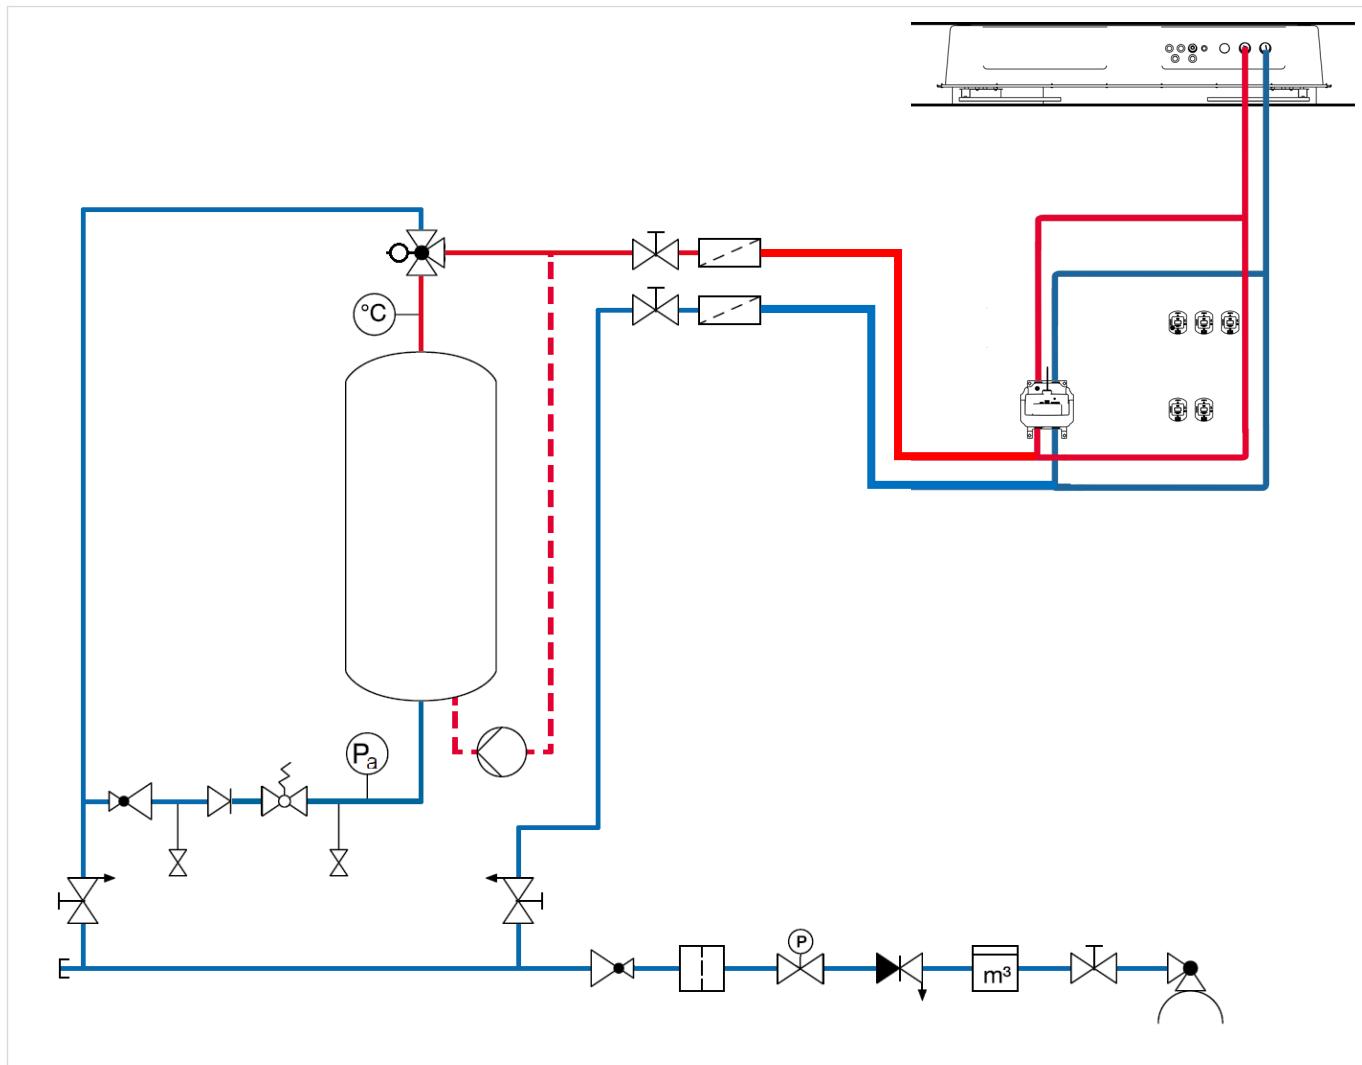

Standard installation

Schematic diagram

KEY

Plumbing information

Key

Plumbing information

Pipework calculation

The pipework must be calculated in accordance with EN 806-3, DIN 1988-300.

The simultaneous use of all other outlet points must be considered (simultaneity).

Pressure reducing components of the AQUAMOON^{ATT}:

- Stop valve 1,2 kPa / 0,174 psi / 0,012 bar
- Dirt trap 14 kPa / 2,03 psi / 0,14 bar

Pressure-reducing components provided by the customer:

- Water meter see manufacturer's specification
- Filter see manufacturer's specification
- Pressure reducing valve (main pipe) see manufacturer's specification
- Water softener, if necessary see manufacturer's specification

Install a speed-controlled pressure booster, if necessary (e.g. in accordance with DIN 1988-500).

Hot water system

To choose the perfect hot-water supply – taking additional tapping points and simultaneous use into consideration – an individual determination of requirements (e.g. according to DIN 1988-200, DIN 4708-2, DIN 4753-7, VDI 6003) is absolutely necessary.

If the hot water temperature is set higher than 65 °C / 149 °F, a thermostatic water mixer must be installed downstream of the hot-water supply (e.g. for a solar-heated systems).

If periodic thermal disinfection is required, the customer must provide an appropriate (manually or automatically operated) bypass of the thermostatic water mixer.

Floor drain

To choose the perfect drain – taking the flow rate of the entire installation into consideration – an individual determination of requirements is necessary. (e.g. in accordance with EN 12056-1/-2, DIN 1986-100).

AQUAMOON^{ATT}

Recommended drainage capacity / drain connection value [DU value] 0,8 l/s / 0,2 gpm

Recommended drain pipe size DN 75

AQUAMOON^{ATT} with optional accessory

Recommended drainage capacity / drain connection value [DU value] 1,8 l/s / 0,5 gpm

Recommended drain pipe size DN 75

Plumbing installation

The water exiting the appliance is no more drinking water due to the addition of small amounts of fragrance.

Flushing of the entire installation with clean water is absolutely necessary (the valid guidelines for the flushing are to be observed).

A flushing report has to be created (e.g. EN 806-4 / DIN 1988-200).

Flush before fitting the exposed trim parts and commissioning.

A pressure test of the entire installation (without angle valves) is absolutely necessary.

The exact procedure for the pressure test (preliminary test / main test) depending on the pipe material used, can be found in the currently applicable directives (EN 806-4, DIN 1988-200, etc.).

A test report has to be created.

Water

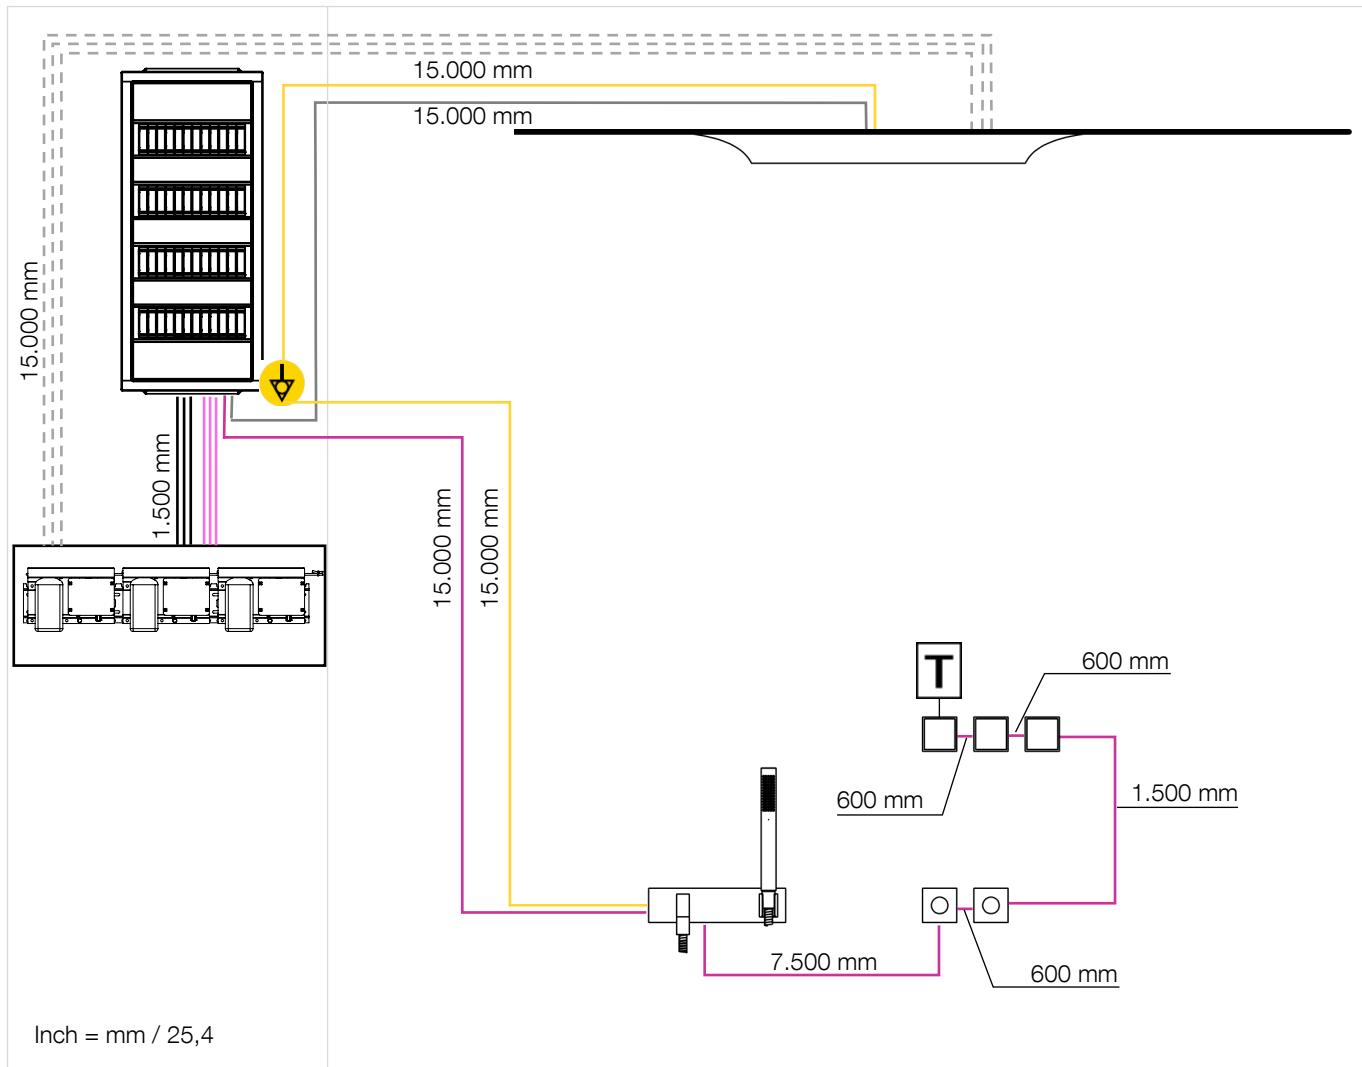

ELECTRICITY

Schema

FUSE BOX WIRING DIAGRAM

Electrical information

Fuse box wiring diagram

Electrical information

Electrical installation

Only connect to the electricity supply when the device is voltage-free.

⚠ Inexpertly completed electrical installations and electrical installations that are not completed as stipulated in this guide can cause electric shocks which could result in serious injury or even death, as well as damage to property.

The electrical installation must be implemented in accordance with IEC 60364-4-41 and DIN VDE 0100 by a qualified electrician. Please conform to national statutory regulations, where different.

The appliances may be connected only to original Dornbracht components.

Space required for electrical components in the fuse box: minimum 4 distributor rows with 12 division units each (1 division unit = 18 mm).

Space required for horizontally installed fragrance modules: Minimum 1050 x 250 x 150 mm overall.

Space required for vertically installed fragrance modules: Minimum 350 x 750 x 150 mm overall.

Equipotential bonding

⚠ Do not create equipotential bonding over water pipes.

It is essential to use and/or install equipotential bonding cables (4 mm² / AWG 11).

Connect the equipotential bonding strip to the main grounding bar.

Provided by customer:

- Fuse box in accordance with planning requirements
- Safety cut-out
- Ground fault circuit interrupter
- Circuit-breaker switch
- 4 x Rail mounting TS 35
- Equipotential bonding rail
- Network connection in accordance with TIA 568A, if necessary

The network connection allows:

- Operation from a mobile device (SMART WATER APP)
- Integration in Smart Home systems (Open Interface)
- Connection to other media (e.g. light and sound systems)

Dornbracht recommends consulting a system integrator.

Electrical components (scope of supply)

- 2 x Power Supply
- 1 x Control Unit
- 1 x VBUS Coupler
- 1 x VBUS IO Module

Safety zones

Observe the regulations for protection zones according to DIN VDE 0100, Part 701 (IEC 60364-7-701).

Please conform to national statutory regulations, where different.

Observe the protection rating of each electrical component, only applicable once the device is fully installed.

The following electrical components must be installed outside safety zones 0 – 2: fuse box.

As AQUAMOONATT, complete hand shower set and SMART TOOLS control elements are operated by safety extra-low voltage (12 V), they can be installed in safety zone 1.

The VBUS connection of electrical components (daisy chain) must end with a terminator.

No more than 5 components should be connected one after the other in the daisy chain.

Dornbracht must be consulted in advance about installations that differ from the planning information.

The total length of the daisy chain may not exceed 30,000 mm / 98 ft 5-1/8".

Technical data

General

Weight

– Total (ceiling module)	69,5 kg / 153,2 lbs. (US)
– Total (with optional accessory)	78,5 kg / 173 lbs. (US)
– Ceiling installation enclosure	35 kg / 77,2 lbs. (US)
– Spray module	18 kg / 39,7 lbs. (US)
– Control and distribution unit	11 kg / 24,3 lbs. (US)
– Cover	5,5 kg / 12,1 lbs. (US)
– Optional accessory	9 kg / 19,8 lbs. (US)

Recess depths

– Ceiling module AQUAMOON ^{ATT}	minimal 290 mm / 11-3/8"
– Concealed rough parts eVALVE	minimal 153 mm / 6 "
	maximal 176 mm / 7 "
– SMART TOOLS control elements	minimal 141 mm / 5-1/2 "
– Drilled hole diameter for concealed box	56 mm / 2-1/4 "

Electrotechnical data

Power supply

– Input voltage	230 V AC
– Output voltage	12 V DC
– Input frequency	50 / 60 Hz
– Maximum power consumption	125 W

Ceiling module AQUAMOON^{ATT}

– Supply voltage	12 V DC
– Degree of protection	IP 55
– Equipotential bonding	4 mm ² / AWG 11

Spray module AQUAMOON^{ATT}

– Supply voltage	12 V DC
– Degree of protection	IP 67

Concealed rough parts eValve (hand shower set)

– Supply voltage	12 V DC
– Degree of protection	IP 55
– Equipotential bonding	4 mm ² / AWG 11

SMART TOOLS control elements (display switch and twist controller)

– Supply voltage	12 V DC
– Degree of protection	IP X4

Duftpumpen

– Supply voltage	230 V AC
– Input frequency	50 / 60 Hz
– Degree of protection	IP 65

Sanitary specifications

The product is intrinsically safe according to EN 1717.

The thermostat meets the requirements according to EN 1111.

Scalding protection (factory-adjusted) 43 °C / 109 °F

Size of the supply lines

Hot and cold water 2 x DN 20

Drainage

AQUAMOON^{ATT}

Drainage capacity / drain connection value [DU value]
0,8 l/s / 0,2 gpm

AQUAMOON^{ATT} with optional accessory

Drainage capacity / drain connection value [DU value]
1,8 l/s / 0,5 gpm

Recommended drain pipe size DN 75

To choose the perfect drain – taking the flow rate of the entire installation into consideration – an individual determination of requirements is necessary. (e.g. in accordance with EN 12056-1/-2, DIN 1986-100).

Maximum flow at a flow pressure of 300 kPa / 44 psi / 3 bar

– Total	32,6 l/min / 8,6 gpm
– Total (with optional accessory)	72,6 l/min / 19,2 gpm
– TEMPEST	10 l/min / 2,6 gpm
– AQUA CIRCLE	12 l/min / 3,2 gpm
– QUEEN'S COLLAR	24 l/min / 6,3 gpm
– EMBRACE (optional accessory)	65 l/min / 17,2 gpm
– Complete hand shower set	7,6 l/min / 2,0 gpm
– SOOTHE (3:12 Min.)	21,2 l / 5,6 gal
– NURTURE (3:45 Min.)	54,2 l / 14,3 gal
– EMPOWER (4:20 Min.)	79,9 l / 21,1 gal
– EMPOWER mit opt. Zubehör (4:20 Min.)	125 l / 33 gal
