BOLLARDS: REMOVABLE EASY

| Categories: BOLLARDS / BARRIERS, URBAN DESIGN

PRODUCT DESCRIPTION

The removable bollard EASY is made in steel with variable thickness, from 20/10 to 50/10. The post is made in tubular steel of 102 mm diam. and 3 mm thickness, laser-cut on the upper part with an inclination of 45°, where a plate of 30/10 thickness is welded through continuous welding, later polished so that it's seamless.

The bollard is placed inside an element, which is later cemented. This element is made in tubular steel of 108 mm diam. and 2 mm thickness. A plate of 50/10 thickness with 160 mm diam. is welded on the top of this element, where a locking system for the post with a triangular key lock is created through laser-cut. This type of carving allows you to remove the bollard without leaving a hole on the ground.

For the realization of this product made in Italy, Steel EN10111DD11 is used and later treated with a cycle of sandblasting, cataphoresis and powder coating. Such cycle is meant to guarantee the protection of the painted products, in an environment of C4 corrosion class, as requested by the UNI regulations EN ISO 12944-2. The products are eventually polyester-powder coated with RAL colours at choice.

Max dimensions:

Height: **790 mm**Bollard diameter: **102 mm**Flange Diameter: **160 mm**Underground extension: **220 mm**

Weight: 9 kg

Material: steel
