Metalarte

Description

Triana is a floor lamp offering the advantage of style and flexibility, with a choice of 3 different shade sizes on the same base. This feature allows one to choose between the shades to achieve the desired effect, for instance the smaller one would be perfect as a reading lamp by a chair in a room with limited space, while the two larger ones could be used to make more of a statement in a bigger room.

Technical Details

The lamp structure is made from injected polyurethane with a shiny lacquered finish in black. The shades sizes range from 35,56 or 84 cms and are in white or black chinz. Each lamp has a dimmer inbuilt to the power cable.

Light source

Halogen E-27 matt Max 250 Watt.

Designer

Triana is a new design by Ramon Ubeda and Otto Canalda for Metalarte. This new lamp follows their "Inout" series (which has become a best seller in the Spanish design market) and the "Nanit" outdoor and signage range which received the ADIF Delta prize in 2007.
